

Bondi XL F320B-2 Freestanding Woodfire

Model: F320B-2

PLEASE KEEP THESE INSTRUCTIONS FOR FUTURE REFERENCE

WARNING:

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual. For assistance or additional information consult an authorised installer, service agency or the distributor.

FOR YOUR SAFETY

Do not store or use petrol or other flammable vapours and liquids in the vicinity of this or any other appliance.

Installation and service must be performed by an authorised installer or service agency.

Thank-you for purchasing a
REGENCY FIREPLACE PRODUCT.

The pride of workmanship that goes into each of our products will give you years of trouble-free enjoyment. Should you have any questions about your product that are not covered in this manual, please contact the **REGENCY DEALER** in your area.

Keep those **REGENCY FIRES** burning.

SAFETY NOTE: If this wood fire is not properly installed, a house fire may result. For your safety, follow the installation instructions, contact local building, fire officials, or authority having jurisdiction about restrictions and installation inspection requirements in your area.

The authority having jurisdiction should be consulted before installation to determine the need to obtain a permit.

DO NOT BURN (WILL VOID WARRANTY):

- Treated wood
- Cardboard
- Tea Tree
- Solvents
- Oil Based woods
- Colored Paper
- Coal
- Trash
- Garbage

RESIDENTIAL INSTALLATION

- 1) Please read this entire manual before you install and use your new wood fire. Failure to follow instructions may result in property damage, bodily injury or even death. Be aware that local Codes and Regulations may override some items in this manual. Check with your local inspector.

2) THE APPLIANCE AND FLUE-SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH AS/NZS 2918:2018 AND THE APPROPRIATE REQUIREMENTS OF THE RELEVANT BUILDING CODE OR CODES.

APPLIANCES INSTALLED IN ACCORDANCE WITH THIS STANDARD SHALL COMPLY WITH THE REQUIREMENTS OF AS/NZS 4013 WHERE REQUIRED BY THE REGULATORY AUTHORITY.

ANY MODIFICATION OF THE APPLIANCE THAT HAS NOT BEEN APPROVED IN WRITING BY THE TESTING AUTHORITY IS CONSIDERED TO BE IN BREACH OF THE APPROVAL GRANTED FOR COMPLIANCE WITH AS/NZS 4013.

CAUTION: MIXING OF APPLIANCE OR FLUE-SYSTEM COMPONENTS FROM DIFFERENT SOURCES OR MODIFYING THE DIMENSIONAL SPECIFICATION OF COMPONENTS MAY RESULT IN HAZARDOUS CONDITIONS. WHERE SUCH ACTION IS CONSIDERED, THE MANUFACTURER SHOULD BE CONSULTED IN THE FIRST INSTANCE.

- 3) Select a position for your Regency Heater. Consult the minimum clearance chart for your model and set the heater in place. For close clearance installation use listed double wall connector systems.
- 4) To ensure vertical alignment, suspend a plumb bob from the ceiling over the exact center of your heater flue and mark a spot on the ceiling to indicate the center of the flue.
- 5) Check that the area above the ceiling is clear for cutting. Re-confirm the clearance from the heater to combustibles to ensure that they are within the prescribed limits.
- 6) Mark the location of the pedestal base on the floor, then move the heater aside and mark the position of the floor protector.
- 7) Install flue according to flue manufacturers instructions. The performance of your wood fire is governed to a very large part by the flue system. Too short a flue can cause difficult start-up, dirty glass, backsmoking when door is open, and even reduced heat output.

Too tall a flue may prompt excessive draft which can result in very short burn times and excessive heat output.

- 8) The floor protector must be of non-combustible material. Refer to page 7 for floor protector clearances.
- 9) When the floor protection is complete, position the heater with the flue collar centered under the installed flue.
- 10) In areas with seismic activity, Regency recommends that your unit is secured to the floor by using the bolt down holes inside the pedestal.
- 11) **Do not connect this unit to a flue serving another appliance.**

SAFETY GUIDELINES AND WARNINGS

- 1) Never use petrol, petrol type lantern fuels, kerosene, charcoal lighter fuel, or similar liquids to start or 'freshen up' a fire in your heater. Keep all such liquids well away from the heater while it is in use.
- 2) Keep the door closed during operation and maintain all seals in good condition.
- 3) Do not burn any quantities of paper, garbage, and never burn flammable fluids such as petrol, naphtha or engine oil in your heater.
- 4) If you have smoke detectors, prevent smoke spillage as this may set off a false alarm.
- 5) Do not overfire heater. If the flue connector, flue baffle or the heater top begin to glow, you are overfiring. Stop adding fuel and close the draft control. Overfiring can cause extensive damage to your heater including warpage and premature steel corrosion. Overfiring will void your warranty.
- 6) Do not permit creosote or soot build-up in the flue system. Check and clean flue at regular intervals. Failure to do so can result in a serious flue fire.
- 7) Your Regency heater can be very hot. You may be seriously burned if you touch the heater while it is operating, keep children, clothing and furniture away. Warn children of the burn hazard. For safety reasons a guard around the fire is recommended.
- 8) The heater consumes air while operating, provide adequate ventilation with an air duct or open a window while the heater is in use.
- 9) Do not connect this unit to a flue serving another appliance.

- 10) Do not use grates or andirons or other methods for supporting fuel. Burn directly on the base or bricks where supplied.

- 11) Open the draft control fully for 10 to 15 seconds prior to slowly opening the door when refuelling the fire.

- 12) Do not connect your unit to any air distribution duct.

- 13) Your wood fire should burn dry, standard firewood only. The use of cut timber, plywood, "mill ends", etc. is not allowed as this fuel can easily overheat your wood fire. Evidence of excessive overheating will void your warranty. As well, a large portion of sawmill waste is chemically treated timber, which is illegal to burn in many areas. Salt drift wood and chemically treated fire logs also must not be burned in your wood fire.

- 14) No combustible material should be closer than the clearances, see page 7.

15) DO NOT OPERATE WITH BROKEN GLASS.

WARNING

Ensure that curtains, blinds and drapes cannot extend to or anywhere near the fire as this could cause an extremely dangerous operating condition. These must be secured by any means possible. Examples not limited to :
If a window or door is opened, the wind/breeze could cause them to move.
Physical movement by an adolescent child.

CAST PLATE INSTALLATION

Install the cast plates by placing the rear cast plate first and then the side plates ensuring the cut out sections lock in firmly.

installation

MINIMUM CLEARANCE TO COMBUSTIBLE MATERIALS

	Triple Skin Mesh Decro	Triple Skin Solid Decro	AHD Special Insulated Flue Kit
A	450mm	450mm	400mm
B	150mm* (1)	150mm* (1)	150mm* (2)
C	300mm	300mm	300mm
D	0mm* (3)	0mm* (3)	0mm* (3)
E	107mm	107mm	107mm
F	300mm	300mm	300mm
G	1015mm	1015mm	1015mm
H	835mm	835mm	835mm

Floor Protection

A combustible floor must be protected by non-combustible material (like tile, concrete board, or as defined by local codes) extending beneath the heater as shown.

From Sides: Dimension (E)
From Front: Dimension (F)
From Back Shield: Dimension (D)

The floor protector should consist of 6mm thick cement fibre sheet which has a thermal resistance of 0.8m² k/w for 6mm sheets of cement fibre sheet.

IMPORTANT

* (1) The **Triple Skin flue kit** requires one 180° x 900mm stainless reflective shield between the decromesh casing and active flue. If no shield is fitted rear clearance should be 250mm.

* (2) The **AHD Special Insulated flue kit** requires one 180° x 1000mm stainless reflective to be fitted behind the active flue.

* (3) Rear **Clearance "D"** is minimum 0mm although for better aesthetics it is recommended to increase to 160mm so as to meet the rear wall - overall hearth depth "H": 935mm

The flue pipe shall extend not less than 4.6m above the top of the floor protector.

NOTE: Installation must be carried out by a licensed installer in accordance with AS/NZS 2918:2018.

NOTE: A minimum clearance of 100mm (flat wall) or 75mm (corner wall) must be retained for all wall surfaces to allow for fan access and maintenance.

STACKER DOOR OPERATION

PLEASE NOTE – THE WOOD STACKER STORAGE UNDERNEATH THE APPLIANCE IS HOT WHEN THE DOOR IS CLOSED AND THE FIRE IS IN USE.

If the appliance is installed with the optional stacker fitted underneath, the front stacker door must be in the open position when the appliance is in use and combustibles are stored underneath the appliance.

IMPORTANT: Any combustibles stored below cannot extend beyond the front of the wood stacker opening.

*Stacker door must be open when used for wood storage.

The stacker door can only be left in the closed position when not being used for wood storage, or when any items in the stacker are non-combustible nor affected by heat.

Stacker door closed when **NOT** used to store combustibles.

Transit screws to keep stacker door closed – remove to access storage area

Replace screws into holes provided to lock stacker door in open position for use

IMPORTANT: THE STACKER COMES WITH THE DOOR CLOSED AND HELD CLOSED BY 2 SCREWS IN THE FRONT. IF USING THE STACKER. REMOVE THE SCREWS TO OPEN THE DOOR. WE HAVE DESIGNED THE UNIT SO THE SCREWS CAN THEN BE USED TO PERMANENTLY FIX THE DOOR OPEN SO THE STACKER CAN BE USED TO STORE FIREWOOD. THE STACKER CANNOT BE USED TO STORE FIREWOOD WITH THE DOOR CLOSED.

No Storage
Storage Area

WARNING: DO NOT PLACE WOOD OR ANY OTHER COMBUSTIBLE MATERIALS ABOVE THE BASE OF THE FAN AIR INLET.

installation

BENCH 2 FAN INSTALLATION

The fan wiring and switch panel can be relocated to the right or left side of bench 2. Follow these steps to remove and reinstall the fan. The switch plate with power cord is designed to pass through the sheet metal openings on the back for installation on either side.

1. Remove the screws on switch plate, and remove the screws and the cover plate located on the back of the bench.
NOTE: Isolate & Disconnect power to the bench before relocating the fan and or switch panel.

2. Remove the 12 screws securing the fan housing cover panel and remove it from the bench. Also remove the top cover panels to provide easier access.
3. Pass the switch plate and power cord through the fan housing to the inside area of the bench.

4. Relocate the wires to the opposite side of the fan assembly by routing the wires underneath the fan.

5. Unbolt the 4 fan fasteners and move the fan to the new location. Reinstall the fasteners.
6. Pass the switch plate and power cord through the back opening. Reinstall the fan housing cover panel using the 12 screws removed in step 2.

7. Relocate the bench top panels to the other side to align with fan.
8. Install the switch plate and the cover plate to the back of the bench with the screws removed in step 1.

OPERATING INSTRUCTIONS

With your unit now correctly installed and safety inspected by your local authority, you are now ready to start a fire. Before establishing your first fire, it is important that you fully understand the operation of your draft control.

CAUTION: THIS APPLIANCE MUST BE MAINTAINED AND OPERATED AT ALL TIMES IN ACCORDANCE WITH THESE INSTRUCTIONS.

CAUTION: THE USE OF SOME TYPES OF PRESERVATIVE-TREATED WOOD AS A FUEL CAN BE HAZARDOUS.

WARNING: ANY MODIFICATION OF THE APPLIANCE THAT HAS NOT BEEN APPROVED IN WRITING BY THE TESTING AUTHORITY IS CONSIDERED AS BREACHING AS/NZS 4013.

WARNING: DO NOT USE FLAMMABLE LIQUIDS OR AEROSOLS TO START OR REKINDLE THE FIRE.

WARNING: DO NOT USE FLAMMABLE LIQUIDS OR AEROSOLS IN THE VICINITY OF THIS APPLIANCE WHEN IT IS OPERATING.

WARNING: DO NOT STORE FUEL WITHIN HEATER INSTALLATION CLEARANCES.

WARNING: OPEN AIR CONTROL (AND DAMPER WHEN FITTED) BEFORE OPENING FIRING DOOR.

For safety reasons and in order to avoid over firing of your unit do not burn your fire with the door open or ajar.

CAUTION: The door handle and air slide components become very hot during operation. Always use a heat-resistant gloves when operating these parts to avoid burns.

CAUTION: When loading wood into the fire, use care as surfaces and embers may be hot. Regency recommends, at a minimum, the use of leather gloves. Please note, any damage to firebricks caused by incorrect loading of fuel is not covered under warranty.

AIR SLIDE CONTROL

Both the primary and air wash drafts are controlled by the control rod located on the right side of the unit (when facing the unit). To increase your draft - pull open, and to decrease - push closed. All units have a secondary draft system that continually allows combustion air to the induction ports at the top of the firebox, just below the flue baffle.

WARNING: To build a fire in ignorance or to disregard the information contained in this section can cause serious permanent damage to the unit and void your warranty!!

2 SPEED FAN OPERATION

A 2-speed fan is fitted to the heater. The fan is controlled by a thermdisc, and Auto / Manual switch and a speed selection switch. The Auto / Manual switch is mounted on the back of the pedestal. The speed select switch is located on the right hand side of the pedestal and has selections for fan OFF/ LOW / HI. The OFF position is marked by a red dot on the pedestal.

Manual control of the fan

Select Manual control and the fan speed will be directly controlled by the selection of the fan speed switch.

Automatic Control of the fan

Select Auto control of the fan and the fan will be controlled by the selection on the fan speed switch and the temperature of the heater. The thermdisc in the fan circuit ensures that the heater has achieved a high temperature before the fan can operate— this may take 20-30 minutes. When the heater cools down the fan will automatically turn off—this may take 20-30 minutes.

Selection OFF on the fan speed switch will always turn the fan off immediately.

FIRST FIRE

When your installation is completed and inspected you are ready for your first fire.

- 1) Open control fully.
- 2) Open firebox door and build a small fire using paper and dry kindling on the firebox base. Secure door on the firebox and wait a few minutes for a good updraft in the flue to establish the fire. (Leaving the door slightly open will help your fire start more rapidly.)

CAUTION: Never leave unit unattended if door is left open. This procedure is for fire start-up only, as unit may overheat if door is left open for too long.

- 3) With the draft still in the fully open position add two or three seasoned logs to your fire. Form a trench in the ash bed to allow air to reach the rear of the firebox prior to closing the door.
- 4) After about 45 minutes, when your wood has begun to burn strongly, adjust your draft control down to keep the fire at a moderate level.

WARNING: Never build a roaring fire in a cold heater. Always warm your heater up slowly!

- 5) Once a bed of coals has been established on the base of the firebox, you may adjust the draft control to a low setting to operate the unit at its most efficient mode.

- 6) During the first few fires, keep the combustion rate at a moderate level and avoid a large fire. Only after 5 or 6 such fires can you operate the heater at its maximum setting, and only after the metal has been warmed.
 - 7) For the first few days, the heater will give off an odour from the paint. This is to be expected as the high temperature paint becomes seasoned. Windows and/or doors should be left open to provide adequate ventilation while this temporary condition exists. Burning the heater at a very high temperature the first few times may damage the paint. Burn fires at a moderate level the first few days.
 - 8) Do not place anything on the heater top during the curing process. This may result in damage to your paint finish.
 - 9) During the first few days it may be more difficult to start the fire. As you dry out your firebrick and your masonry flue, your draft will increase.
 - 10) For those units installed at higher elevations or into sub-standard masonry fireplaces, drafting problems may occur. Consult an experienced dealer or mason on methods of increasing your draft.
 - 11) Some cracking and popping noises may be experienced during the heating up process. These noises will be minimal when your unit reaches temperature.
 - 12) Before opening your door to reload, open draft fully for approximately 10 to 15 seconds until fire has been re-established. This will minimize any smoking.
 - 13) All fuel burning appliances consume oxygen during operation. It is important that you supply a source of fresh air to your unit while burning. A slightly opened window is sufficient for the purpose. If you also have a fireplace in your home, a downdraft may be created by your Regency Heater causing a draft down your flue. If this occurs, slightly open a window near your unit.
- CAUTION: If the body of your unit, flue baffle or any part of the flue connector starts to glow, you are overfiring. Stop loading fuel immediately and close the draft control until the glow has completely subsided.**
- 14) Green or wet wood is not recommended for your unit. If you must add wet or green fuel, open the draft control fully until all moisture has been dispersed by the intense fire. Once all moisture has been removed, the draft control may be adjusted to maintain the fire.
 - 15) If you have been burning your heater on a low draft, use caution when opening the door. After opening the damper, open the door a crack, and allow the fire to adjust before fully opening the door.

16) The controls of your unit or the air supply passages should not be altered to increase firing for any reason.

17) If you burn the unit too slowly or at too low a setting your unit will not be operating as efficiently as it can. An easy rule of thumb says that if your glass is clean, then your flue is clean and your exhaust is clean. Burn the heater hot enough to keep your glass clean and you won't need to clean your flue as often.

CREOSOTE

When wood is burned slowly, it produces tar and other organic vapours, which when combined with moisture, form creosote. The creosote vapours condense in the relatively cool flue of a slow burning fire. As a result, creosote residue accumulates on the flue lining. When ignited, this creosote can result in an extremely hot fire.

WARNING: Things to remember in case of a flue fire:

1. Close all draft and damper controls.

2. CALL THE FIRE DEPARTMENT.

Ways to Prevent and Keep Unit Free of Creosote

- 1) Burn heater with the draft control wide open for about 10-15 minutes every morning during burning season.
- 2) Burn heater with draft control wide open for about 10 -15 minutes every time you apply fresh wood. This allows the wood to achieve the charcoal stage faster and burns up any unburned gas vapours which might otherwise be deposited within the system.
- 3) Only burn seasoned wood! Avoid burning wet or green wood. Seasoned wood has been dried at least one year.
- 4) A small hot fire is preferable to a large smouldering one that can deposit creosote within the system.
- 5) The flue and flue connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred.
- 6) Have flue system and unit cleaned by competent flue sweeps twice a year during the first year of use and at least once a year thereafter or when a significant layer of creosote has accumulated (3 mm) it should be removed to reduce the risk of a flue fire.

WOOD STORAGE

Store wood under cover, such as in a shed, or covered with a tarp, plastic, tar paper, sheets of scrap plywood, etc., as uncovered wood can absorb water from rain or snow, delaying the seasoning process.

MAINTENANCE

It is very important to carefully maintain your fireplace heater, including burning seasoned wood and maintaining a clean heater and flue system. Have the flue cleaned before the burning season and as necessary during the season, as creosote deposits may build up rapidly. Moving parts of your heater require no lubrication. The integrity of all heater parts including baffle plates, cast iron liners, fire bricks, air tubes, air bars, door rope seals, and door glass is imperative for the correct operation and longevity of your Regency Wood heater. They should be inspected on a regular basis and replaced if they show any signs of undue wear or damage. Failure of any of these components can damage the heater and void warranty.

GLASS MAINTENANCE

Your Regency heater is supplied with 5mm Neoceram ceramic glass that will withstand the highest heat that your unit will produce. In the event that you break your glass by impact, purchase your replacement from an authorized Regency dealer only, and follow our step-by-step instructions for replacement.

Allow the heater to cool down before cleaning the glass, do not clean the glass when it is hot. Do not use abrasive cleaners.

Note : Thermodisc (temp. switch) in the fan control circuit. Heater/ Thermodisc must come up to operating temperature for fan to operate. See page 19, 2-speed fan operation.

DOOR LATCH ADJUSTMENT

Door latch adjustment

1. With a cold appliance, open the door.
2. Loosen the two bolts above and below the latch pin.
3. Move the latch plate towards the firebox for a tighter fit.
4. Retighten the bolts, close the door and test the latch operation.

Limited Warranty

FPI Fireplace Products International Ltd. ("the manufacturer") through its wholly owned subsidiary, Fireplace Products Australia Pty Ltd (for Australia and New Zealand customers) and sold under the Regency® brand of fireplace products (collectively referred to herein as "FPI"), extends this Limited Warranty to the original purchaser of this appliance provided the product remains in the original place of installation. The items covered by this limited warranty and the period of such coverage is set forth in the table below.

Some conditions apply (see below).

The policy is not transferable, amendable or negotiable under any circumstances.

Wood Products	Component Coverage				Labor Coverage
	15 years	2 years	1 year	Warranty	(Years)
Welded Firebox Steel	✓				5
All Stainless Steel Components, Smoke Deflectors, Heat Shields etc.			✓		1
Air Tubes			✓		1
Airmate			✓		1
Door handle and latch assembly, all hardware			✓		1
Glass Thermal Breakage Only			✓		1
Steel Faceplates, Accessory Housings			✓		1
All Plating			✓		1
Ash Drawer, Heatshields, Pedestal			✓		1
All Baffles-Steel, Ceramic, Vermiculite			✓		1
All castings, firebox, surrounds, doors, panels etc.			✓		1
All Electrical, Fans, wiring, switches etc.		✓ (Fan only)	✓		1
Glass - Crazing			✓		1
Catalyst Assembly (see below for specific details)				6 Years Prorated	3
Flue components			✓		1
Firebricks				Nil	Nil

After the original warranty coverage for any of the parts above have expired, any repair and/or replacement parts purchased by the consumer from FPI or through an accredited distributor or dealer will carry a ninety (90) day warranty (valid only with an original copy of the tax invoice). No labor coverage is included with any repair and/or replacement part.

Replacement parts are limited to one per warranty term. Airtube and baffle replacements are limited to one replacement per term.

Catalyst Assembly

IMPORTANT WARRANTY INFORMATION FOR UNITS WITH A CATALYTIC CONVERTER

FPI will replace, at no charge to the consumer, 'one' catalytic converter that ceases to function within three (3) years from the date of purchase by the original consumer, provided that the following conditions are met:

- (1) The catalytic converter must not have been mechanically abused
- (2) Only recommended fuels have been used in the appliance

If after three (3) years the catalytic converter fails to function, a prorated warranty will provide for replacement at the following fee schedule to be paid by the consumer*:

Year 4.....	\$90*
Year 5.....	\$100*
Year 6.....	\$110*

* Prices subject to change without notice. Conditions (1) and (2) above also apply for prorated warranty periods.

AFTER YEAR SIX (6), THE CONSUMER MUST PURCHASE ANY CATALYTIC CONVERTERS THAT NEED REPLACEMENT AT THE CURRENT RETAIL PRICE, AND WILL BE RESPONSIBLE FOR ANY LABOUR COSTS TO REMOVE AND/OR SERVICE. LABOR WILL ONLY BE COVERED ON THE CATALYTIC CONVERTER FOR THE FIRST THREE (3) YEARS.

Conditions:

Warranty protects against defect in manufacture or FPI factory assembled components only, unless herein specified otherwise. This warranty will only apply to those products which are acquired at the time of this warranty being effective. FPI will not be liable for any damage or loss that falls outside the scope of the warranty.

Any part(s) found to be defective during the warranty period as outlined above will be repaired or replaced at FPI's option through an accredited distributor, dealer or pre-approved and assigned agent provided that the defective part is returned to the distributor, dealer or agent for inspection if requested by FPI. Alternatively, FPI may at its own discretion fully discharge all of its obligations under the warranty by refunding the verified purchase price of the product to the original purchaser. The purchase price must be confirmed by an original copy of the tax invoice.

The authorised selling dealer, or an alternative authorised FPI dealer if pre-approved by FPI, is responsible for all in-field diagnosis and service work related to all warranty claims. This warranty does not cover dealer travel costs for diagnostic or service work. Dealers may charge homeowner for travel and additional time. Check with your selling dealer in advance for any costs to you when arranging a warranty call. FPI is not responsible for results or costs of workmanship of unauthorised FPI dealers or agents in the negligence of their service work. Additional service fees may apply if you are seeking warranty service from a dealer other than the dealer from whom you originally purchased the product.

At all times FPI reserves the right to inspect reported complaints on location in the field claimed to be defective and determine whether the warranty will apply prior to processing or authorising of any claim. Failure to allow this upon request will void the warranty.

All warranty claims must be submitted by the dealer servicing the claim, including an original copy of the tax invoice (proof of purchase by you). All claims must be complete and provide full details as requested by FPI to receive consideration for evaluation, including proof of maintenance records. Incomplete claims may be rejected. FPI has absolute discretion to assess and determine any warranty claim and may accept or reject a claim as it considers appropriate. Any part or parts of the unit found to be defective will be repaired or replaced at FPI's option, through an accredited distributor or service agent provided that the defective part be returned to the distributor or agent, **Transportation Prepaid**, if requested. **It is the general practice of FPI to charge for larger, higher priced replacement parts and issue credit once the replaced component has been returned to FPI and evaluated for manufacturer defect.**

If a consumer has a unit installed outside an accredited distributor, dealer or pre-approved service agent's service area, or the closest approved service agent is situated more than thirty (30) kilometres from the installation, FPI is not obliged to arrange warranty repairs or shipping/transportation costs. In these cases, the consumer must arrange warranty service with its selling dealer, and shipping, travel and/or additional labor charges will apply.

Unit must be installed according to all manufacturers' instructions as per the manual.

All Local and National required codes must be met.

The installer is responsible to ensure the unit is operating as designed at the time of installation.

The original purchaser is responsible for annual maintenance of the unit, as outlined in the owner's manual. As outlined below, the warranty may be voided due to problems caused by lack of maintenance. Annual maintenance records should be retained.

Exclusions:

This Limited Warranty does not extend to paint, rust or corrosion of any kind due to a lack of maintenance or improper venting, combustion air provision, corrosive chemicals (i.e. chlorine, salt, air, etc.), firebrick (rear, sides or bottom), door or glass gasket, or any other additional factory fitted gasket.

Malfunction, damage or performance based issues as a result of environmental conditions, location, chemical damages, downdrafts, installation error, installation by an unqualified installer, incorrect chimney components (including but not limited to cap size or type), operator error, abuse, misuse, use of improper fuels (such as unseasoned timber, mill-ends, construction timber or debris, off-cuts, treated or painted timber, tea tree, metal or foil, plastics, garbage, solvents, cardboard, coal or coal products, oil based products, waxed cartons, compressed pre-manufactured logs), accidents, lack of regular maintenance and upkeep, acts of God, weather related problems from hurricanes, tornados, earthquakes, floods, lightning strikes/bolts or acts of terrorism or war, which result in malfunction of the appliance are not covered under the terms of this Limited Warranty.

FPI has no obligation to enhance or modify any unit once manufactured (i.e. as products evolve, field modifications or upgrades will not be performed on existing appliances).

Any unit showing signs of neglect or misuse will not be covered under the terms of this warranty policy and may void this warranty. This includes units with rusted or corroded fireboxes which have not been reported as rusted or corroded within three (3) months of installation/purchase. Any alteration to the unit which causes sooting or carboning that results in damage to the exterior fascia or over firing that can cause component or firebox/heat exchanger failure will not be covered by this warranty.

Units which show evidence of being operated while damaged, or with problems known to the purchaser and causing further damages will void this warranty.

Units where the serial no. has been altered, deleted, removed or made illegible will void this warranty.

Minor movement, expansion and contraction of the steel is normal and is not covered under the terms of this warranty.

Freight damages for products or parts are not covered under the terms of the warranty.

Porcelain/Enamel: Absolute perfection is neither guaranteed nor commercially possible. Any chips must be reported and inspected by the authorised selling dealer within three (3) days of installation. Any damage of this type not reported after this time period will be subject to rejection and any related warranty will not apply.

Special Finishes: Expect some changes in color as the product "ages" with constant heating and cooling. The manufacturer warranty does not cover tarnishing, changing colors and/or marks (i.e. finger prints, etc.) after the purchase of the product. Damage from the use of abrasive cleaners is not covered by warranty.

Products made or provided by other manufacturers and used in conjunction with the FPI appliance without prior authorisation from FPI may void this warranty.

INCORRECT INSTALLATION IS NOT COVERED BY WARRANTY. A SERVICE OR CALLOUT FEE WILL BE CHARGED IN THESE CIRCUMSTANCES.

Limitations of Liability:

1. Exclusion of implied terms

The customer may have the benefit of consumer guarantees under the Australian Consumer Law. To the maximum extent permitted by law, all terms, conditions or warranties that would be implied into this Warranty or in connection with the supply of any goods or services by the supplier under law or statute or custom or international conventions are excluded.

2. Limitation of liability

- (a) To the maximum extent permitted by law and subject to clauses 1 and 3, the supplier's total liability arising out of or in connection with its performance or its obligations pursuant to this Warranty, or arising out of or in connection with the supply of specific goods or services (including pursuant to or for breach of this Warranty, under statute, in equity or for tort, including negligent acts or omissions) is limited as follows: (i) the supplier shall have no liability to the customer for any Consequential Loss; (ii) without limiting the effect of clause 2(a)(i), the supplier's total aggregate liability for Loss, however arising, shall not exceed the GST exclusive aggregate price paid by the customer to the supplier for the specific goods or services that gave rise to the Loss in question.
- (b) The limitations and exclusions in this sub-clause do not apply to the extent that any Loss is directly attributable to: (i) the personal injury or death caused by the supplier's default, breach of this Warranty or negligence; or (ii) fraud by the supplier.
- (c) Each party must take reasonable steps to mitigate any Loss it suffers or incurs.

3. Limitation of liability under Australian Consumer Law Guarantees

- (a) To the extent that goods supplied by the supplier are not goods of a kind ordinarily acquired for personal, domestic or household use and the customer is deemed to be a consumer for the purposes of section 64A of the Australian Consumer Law, the customer agrees that the supplier's liability for a failure to comply with a consumer guarantee that the customer may have a benefit under the Australian Consumer Law (other than a guarantee under sections 51 (title), 52 (undisturbed possession) and 53 (undisclosed securities)), is limited to, at the option of the supplier, one or more of the following: (i) replacement of the goods or the supply of equivalent goods; (ii) the repair of the goods; (iii) the payment of the cost of replacing the goods or of acquiring equivalent goods; or (iv) equivalent goods; or (v) the payment of the cost of having the goods repaired.
- (b) To the extent that services supplied by the supplier are services other than services of a kind ordinarily acquired for personal, domestic or household use or consumption, the supplier's liability for failure to comply with a consumer guarantee that the customer may have the benefit of is limited to, at the option of the supplier: (i) the supply of the services again; or (ii) the payment of the cost of having the services supplied again.

4. Subject to Change

This Limited Warranty is given at the time of sale and purchase of the relevant fireplace product. The terms of this Limited Warranty may be amended from time to time by FPI in accordance with changes to business practices, consumer laws or other legal requirements. The rights and protections granted under the Limited Warranty are those in force in relation to a fireplace product at the time and in the place of sale of that product, and only those terms will be applicable in respect of that product.

5. Severability

Any term of this Limited Warranty that is invalid or unenforceable in any jurisdiction is to be read down for the purposes of that jurisdiction, if possible, so as to be valid and enforceable, and is otherwise capable of being severed to the extent of the invalidity or unenforceability, without affecting the remaining provisions of this Limited Warranty or affecting the validity or enforceability of that provision in any other jurisdiction.

6. Definitions

For purposes of clauses 1, 2 and 3:

- (a) Consequential Loss means loss of expected savings, loss of use, loss of opportunity, loss of profit, loss of revenue, increased financing costs, loss arising from delay, or any consequential, special or indirect loss or damage, whether or not the possibility or potential extent of the loss or damage was known or foreseeable, and whether arising from a claim under indemnity, contract, tort (including negligence), statute or otherwise.
- (b) Loss means any expense, cost or damage of any kind and includes Consequential Loss and a fine or penalty imposed by a statutory or other authority.

PRODUCT LIFE CYCLE:

By recycling your used appliances, you divert waste from your local landfills and help the environment. You also reduce the need for raw materials to manufacture new products. Contact your local municipality for appliance recycling services, local recycling programs, or appliance removal services to ensure your Regency appliance components, and packaging are properly recycled.
